SanCeram

Stainless Steel Solutions

As market leaders in commercial sanitaryware, we pride ourselves in delivering products that offer exceptional value and performance. With comprehensive products available for all sectors, our technical team ensure that we offer the right solution for every environment. We are competitively priced and our passion for providing the very best service is what sets us apart.

Our in-house brand **SanCeram** has been developed using our extensive knowledge of the washroom industry. Combining contemporary design with uncompromising performance, SanCeram delivers outstanding quality at an unexpectedly affordable price. Each product is engineered for ease of cleaning and maintenance, while offering a stylish, practical solution that works across all budgets and sectors.

SanCeram Stainless Steel

Manufactured in the UK, SanCeram Stainless Steel products represent a fusion of strength, sustainability and long-term value. Stainless Steel is one of the most environmentally responsible materials available today. It's incredibly durable, highly resistant to corrosion and 100% recyclable.

Hygienic and safe

SanCeram Stainless Steel is a preferred choice in sectors where hygiene is non-negotiable. Stainless Steel is highly resistant to rust and corrosion, especially grades 304 and 316, making it ideal for wet and humid environments where hygiene is critical.

With no surface coatings or chemical additives, it offers a safe, inert surface that meets stringent hygiene standards. Many of our Stainless Steel products are fully compliant with HBN 00-10 Part C (formerly HTM64), ensuring full alignment with NHS health building guidelines.

A team you can trust

Behind every SanCeram product is a team of skilled engineers and craftspeople who are committed to quality and performance. With decades of manufacturing expertise, we ensure every product meets our exacting standards and exceeds customer expectations.

At the heart of everything we do is a commitment to efficient manufacturing, responsible resource management and minimal environmental impact. That's why Stainless Steel plays a central role in our SanCeram product line. Embodying strength, longevity and environmental responsibility, Stainless Steel is one of the most sustainable materials available, it is durable, corrosion-resistant and 100% recyclable.

Exceptional durability

SanCeram Stainless Steel products are designed to perform over the long term. Their inherent durability and low maintenance characteristics make them ideal for high-traffic, high-demanding healthcare, commercial and public spaces. Unlike mild Steel, Stainless Steel resists corrosion and doesn't require coatings or treatments to maintain its strength.

304 grade Stainless Steel

The SanCeram Stainless Steel range is manufactured using 304 grade Stainless Steel (EN 1.4301), known for its excellent corrosion resistance. It's easy to form, fabricate and finish, making it a trusted standard for versatile, durable applications across a wide range of sectors.

Naturally corrosion-resistant

Each product benefits from the material's chromium content of at least 10.5%, which forms a self healing oxide layer that protects the surface from corrosion. For enhanced strength and resilience, selected products also incorporate elements like nickel and molybdenum, making them suitable for even the most challenging of environments.

Leading the way in sustainability

Environmental responsibility is at the core of the SanCeram range. Our Stainless Steel is 100% recyclable, with over 70% recycled content. It's produced using energy-efficient methods, relying on abundant scrap iron and recyclable metals like chromium and nickel. Thanks to its high scrap value, every SanCeram product is fully recyclable at the end of its life, supporting a sustainable future.

Infection prevention benefits of Stainless Steel sinks

Stainless Steel sinks are engineered specifically for healthcare environments, playing a vital role in infection prevention. Every aspect of their design helps limit the spread of bacteria and viruses, supporting safer, more hygienic clinical settings.

- ✓ Seamless construction – Smooth, joint free surfaces leave nowhere for dirt to hide, making cleaning more effective and reducing contamination risks
- ✓ Overflow-free designs – Omitting plugs and overflow holes eliminates common bacterial hotspots, aligning with hygiene protocols in clinical spaces
- ✓ Integrated splashbacks – Built-in upstands prevent water from reaching surrounding surfaces, helping to keep adjacent areas dry and hygienic
- ✓ Optimised drainage – Fast, clean waste water removal reduces standing water and limits potential bacterial growth

Stainless Steel healthcare sinks are more than just hygiene fixtures, they are an essential part of any hospital's infection prevention strategy. Their robust, easy-to-clean design helps healthcare professionals uphold rigorous standards while reducing the risk of avoidable infections.

Equipped with hands-free controls and installed in line with safety protocols, Stainless Steel sinks support the fast-paced demands of clinical settings without compromising hygiene. Their durability and excellent sustainability credentials also make them a smart, long-term investment.

**SanCeram Bucket Sink - Floor Standing
SSBS**

Our SanCeram Stainless Steel Bucket Sink is a high-quality, space-saving solution designed for environments that require reliable sanitation and durability. Ideal for use in commercial kitchens, education settings and other professional spaces where cleanliness and performance are a priority.

Features & Benefits

- Manufactured from durable grade 304 Stainless Steel for long-lasting hygiene and performance
- 1mm material thickness for commercial-grade strength and resistance
- 400mm high splashback to protect walls from water and chemical splashes
- Hinged grid for efficient draining and bucket support
- Supplied with wall brackets and height adjustable legs for enhanced support and easy installation

SanCeram Disposal Unit (DU) SSDUB | SSDUT

Our SanCeram Stainless Steel Disposal Unit is designed for the safe and hygienic disposal of liquid and solid waste in clinical and healthcare environments. Fully compliant with HBN 00-10 Part C, ensuring full alignment with NHS health building guidelines.

Features & Benefits

- Compliant with HBN 00-10 Part C for use in healthcare environments
- Wall-hung Stainless Steel disposal unit designed for clinical waste disposal
- 1.2mm thick grade 304 Stainless Steel with a satin finish for durability and easy cleaning
- Comes complete with cistern, flush, flush pipe and cantilever brackets
- Top and back outlet versions available for installation flexibility
- 110mm diameter outlet suitable for P trap connection (trap sold separately)
- Cantilever brackets provide strong, stable wall-mounting

 [View and order online](#) 

SanCeram Disposal Unit with Grate (DU) SSDUGB | SSDUGT

Our SanCeram Stainless Steel Disposal Unit with Grate is a premium, high-performance solution engineered for the safe and hygienic disposal of liquid and solid waste in clinical settings. Ideal for use in hospitals, clinics, care homes and other facilities where infection control is essential.

Features & Benefits

- Meets the requirements of HBN 00-10 Part C, suitable for healthcare and clinical settings
- Durable Stainless Steel wall-hung unit designed for medical waste disposal
- Made from 1.2mm grade 304 Stainless Steel with an easy-to-clean satin finish
- Hinged bucket grate for added functionality
- Supplied with all key components: cistern, flush, flush pipe and brackets
- Top and back outlet options available
- 110mm diameter outlet suitable for P trap connection (trap sold separately)
- Strong cantilever brackets provide reliable wall-mounted support
